

COATING

FUNCTIONALITY DELIVERED. PRECISION ASSURED.

Coatings do far more than protect materials. They add functional properties, enhance performance and play a key role in the quality and durability of a wide range of products.

With highly precise coating rollers and comprehensive process expertise, we develop customized solutions for a wide variety of coating applications. Working closely with our customers, we optimize coating processes, achieve repeatable coating quality and create the foundation for efficient manufacturing.

Whether adhesives, lacquers, silicones or functional coatings – our solutions combine maximum precision with outstanding process reliability.

The result is coating processes that deliver consistently reproducible quality.

COATING SOLUTIONS

Every coating application places unique demands on coating weight, layer thickness and surface quality. Our coating solutions are precisely tailored to the coating medium, substrate and manufacturing process.

PROCESS DEVELOPMENT

Working closely with our customers, we develop coating solutions that combine outstanding quality with efficient production. From selecting the appropriate roller technology to optimizing the coating process, we support every project individually.

COATING ROLLERS

Our coating rollers are precisely engineered to match the coating medium, coating weight and process requirements. The result is solutions that ensure maximum precision and consistently high coating quality.

ENGRAVING TECHNOLOGIES

Laser, chemical etching and mechanical engraving technologies enable highly precise surface structures for a wide range of coating applications. Every engraving is individually designed to meet the requirements of the coating medium and application.

MEASUREMENT & PROCESS EXPERTISE

Advanced measurement technology and comprehensive process expertise provide the foundation for repeatable coating performance. All relevant engraving and process parameters are precisely analyzed and documented.

APPLICATION EXPERTISE

Our solutions ensure uniform coating quality, repeatable results and stable production processes – regardless of the coating medium or application.
