

SAUERESSIG®

SAUERESSIG Group
Power your Ideas

We support **your ideas**

Single thoughts become an idea, individual parts become a machine – and in the end it's even more than you expected. When a cylinder rotates, it gives shape and color to the material beneath, it turns an idea into a product. This applies to film with a brand logo as well as to the embossed kitchen roll, the glossy lettering on a package as well as the textured wooden floor surface or the leather in your car interior.

It's the everyday products that often require sophistication, inventive spirit and technical know-how – and where these products are created, our tools are in use.

“An excellent product is always a good idea first. But many things need inspiration, sufficient background knowledge and the right tools.”

Creativity that catches the eye

Our tools are used in the production of flexible packaging as well as in the food, pharmaceutical and tobacco industries.

We have been rooted in the packaging market for decades, helping well-known brands, brand owners and packaging experts optimize their product portfolio.

We have an instinct for creative designs, an eye for elaborate effects and technology to ensure optimal color management - making every product an eye-catcher.

Could you imagine?

Pssst – our experts for security printing develop complex 3D and microprinting technologies that are used on many packaging concepts or banknotes. Absolutely secure and anti-counterfeit!

Variety that's plain to see

From coffee capsules to the yogurt lid or your juice cartons. We accompany you throughout the day.

Glossy lettering, embossed logo, dazzling colors, sustainable materials. We engage with trends within the industry and know what matters.

For can embossing, we have developed innovative 3D structures for metal surfaces. We set unique accents with filigree embossing of individual words or graphic elements. You can feel the difference!

Ideas for products with character

Innovative and sustainable materials, modern processes, sophisticated results. Surfaces are versatile, and so are we.

From textured wood flooring, to patterned wallcoverings, to intricate furniture and architectural foils. We fill your rooms with life.

Well-known manufacturers in the sports and fashion industry are amongst our customers. Whether it's a leather handbag, a soccer ball or the tartan track on the local sports field – when it comes to surface finishing, we focus on versatility.

Inspiration for individual experiences

We ensure optimal look and feel, innovative technical features and an appealing surface design.

From soft toilet paper, to embossed shower walls, to medical hygiene products. The use of our gravure printing and embossing tools is extensive. You can see and feel us – every day.

Flexibility that gives confidence

Whether in diapers, wipes or face masks, in wound healing or clinical applications in the surgery room – nonwovens have become part of everyday life.

Our technologies support optimal fiber processing and enable high-performance fluid management, tear resistance or air permeability.

Could you imagine?

Our tools are also used for the food industry. In packaging for meat or fruit, nonwoven inlays ensure more freshness and sustainability.

Quality that inspires

In the metal processing industry, our tools are used in the production of structured facades, building materials or stairs.

Aesthetic, stable, useful. Solar glass is just one of our mainstays in the glass industry. An extremely challenging working environment that requires complex manufacturing processes.

Innovation that creates prospects

With our developments in battery processing technology, we are among the international leaders. We build machines for the pioneers of tomorrow.

We are involved in complex manufacturing process for batteries and capacitors and cooperate with international automotive and battery manufacturers.

With a firm pillar in electro mobility, we realize patented special solutions that are unique in this form worldwide. A growing market with a future – and we are integral to this growth.

Could you imagine?

Our tools are also involved in the production of leather and artificial leather surfaces as well as plastic surfaces in the interior of your car.

Visions for a better future

Progress through innovation. We trust in the potential in our ideas, our products and each of our employees.

Not every one of our footprints is green yet. But we know our responsibility and take it seriously every day.

In addition to sustainable and resource-saving manufacturing processes, we rely on innovative technologies, work on forward-looking research projects and invest in the development of intelligent workflows and digital solutions. We keep moving for you.

SAUERESSIG turns ideas into **product solutions**

We are engineering experts for special machine construction and know every adjusting screw on our machines. We are technicians for individual solutions and develop innovative production processes. We provide creative ideas for new packaging designs and optimize the structure of any surface - whether paper, wood or leather.

With our experience, innovative spirit and technological know-how, we are at home in a wide range of industries. Thanks to our

global presence, we guarantee excellent development, implementation and coordination of international projects.
