SAUERESSIG Group Power your Ideas

SAUERESSIG Group, as part of Matthews International Corporation, is a recognized expert for rotogravure and embossing tools, flexographic printing and special machine construction. The common umbrella brand is bringing together the business units Packaging, Surfaces, Rollers, Engineering and Elastomers.

In the SAUERESSIG Group we combine decades of experience and focus on quality, versatility and international group strength. As an industry expert for the manufacturing and engineering industries and an innovative partner for creative and digital solutions, we support our customers in all their business areas and thus actively shape the markets of today and tomorrow.

We believe in the power of new ideas. With our worldwide network, our know-how and our creativity we see ourselves as a strong partner at our customers' side.

As the leading international supplier along the pre-press stage as well as rotogravure and embossing cylinders, SAUERESSIG Surfaces offers a strong technical expertise. Within the surface sector this is based in the field of tissue and hygiene products, non-wovens as well as wood, flooring and plastics processing industry. The brand also unites a wide-ranging set of competencies in surface design. These are primarily used in the field of decor as well as in the automotive, leather or wallpaper industry.

With SAUERESSIG Surfaces, we thus combine diverse competences from all areas of surface refinement. Our combined range of products and services enables us to continuously consolidate and expand our position in the global surfaces market.

“Together with our customers we open a new chapter.”

Versatility is our strength

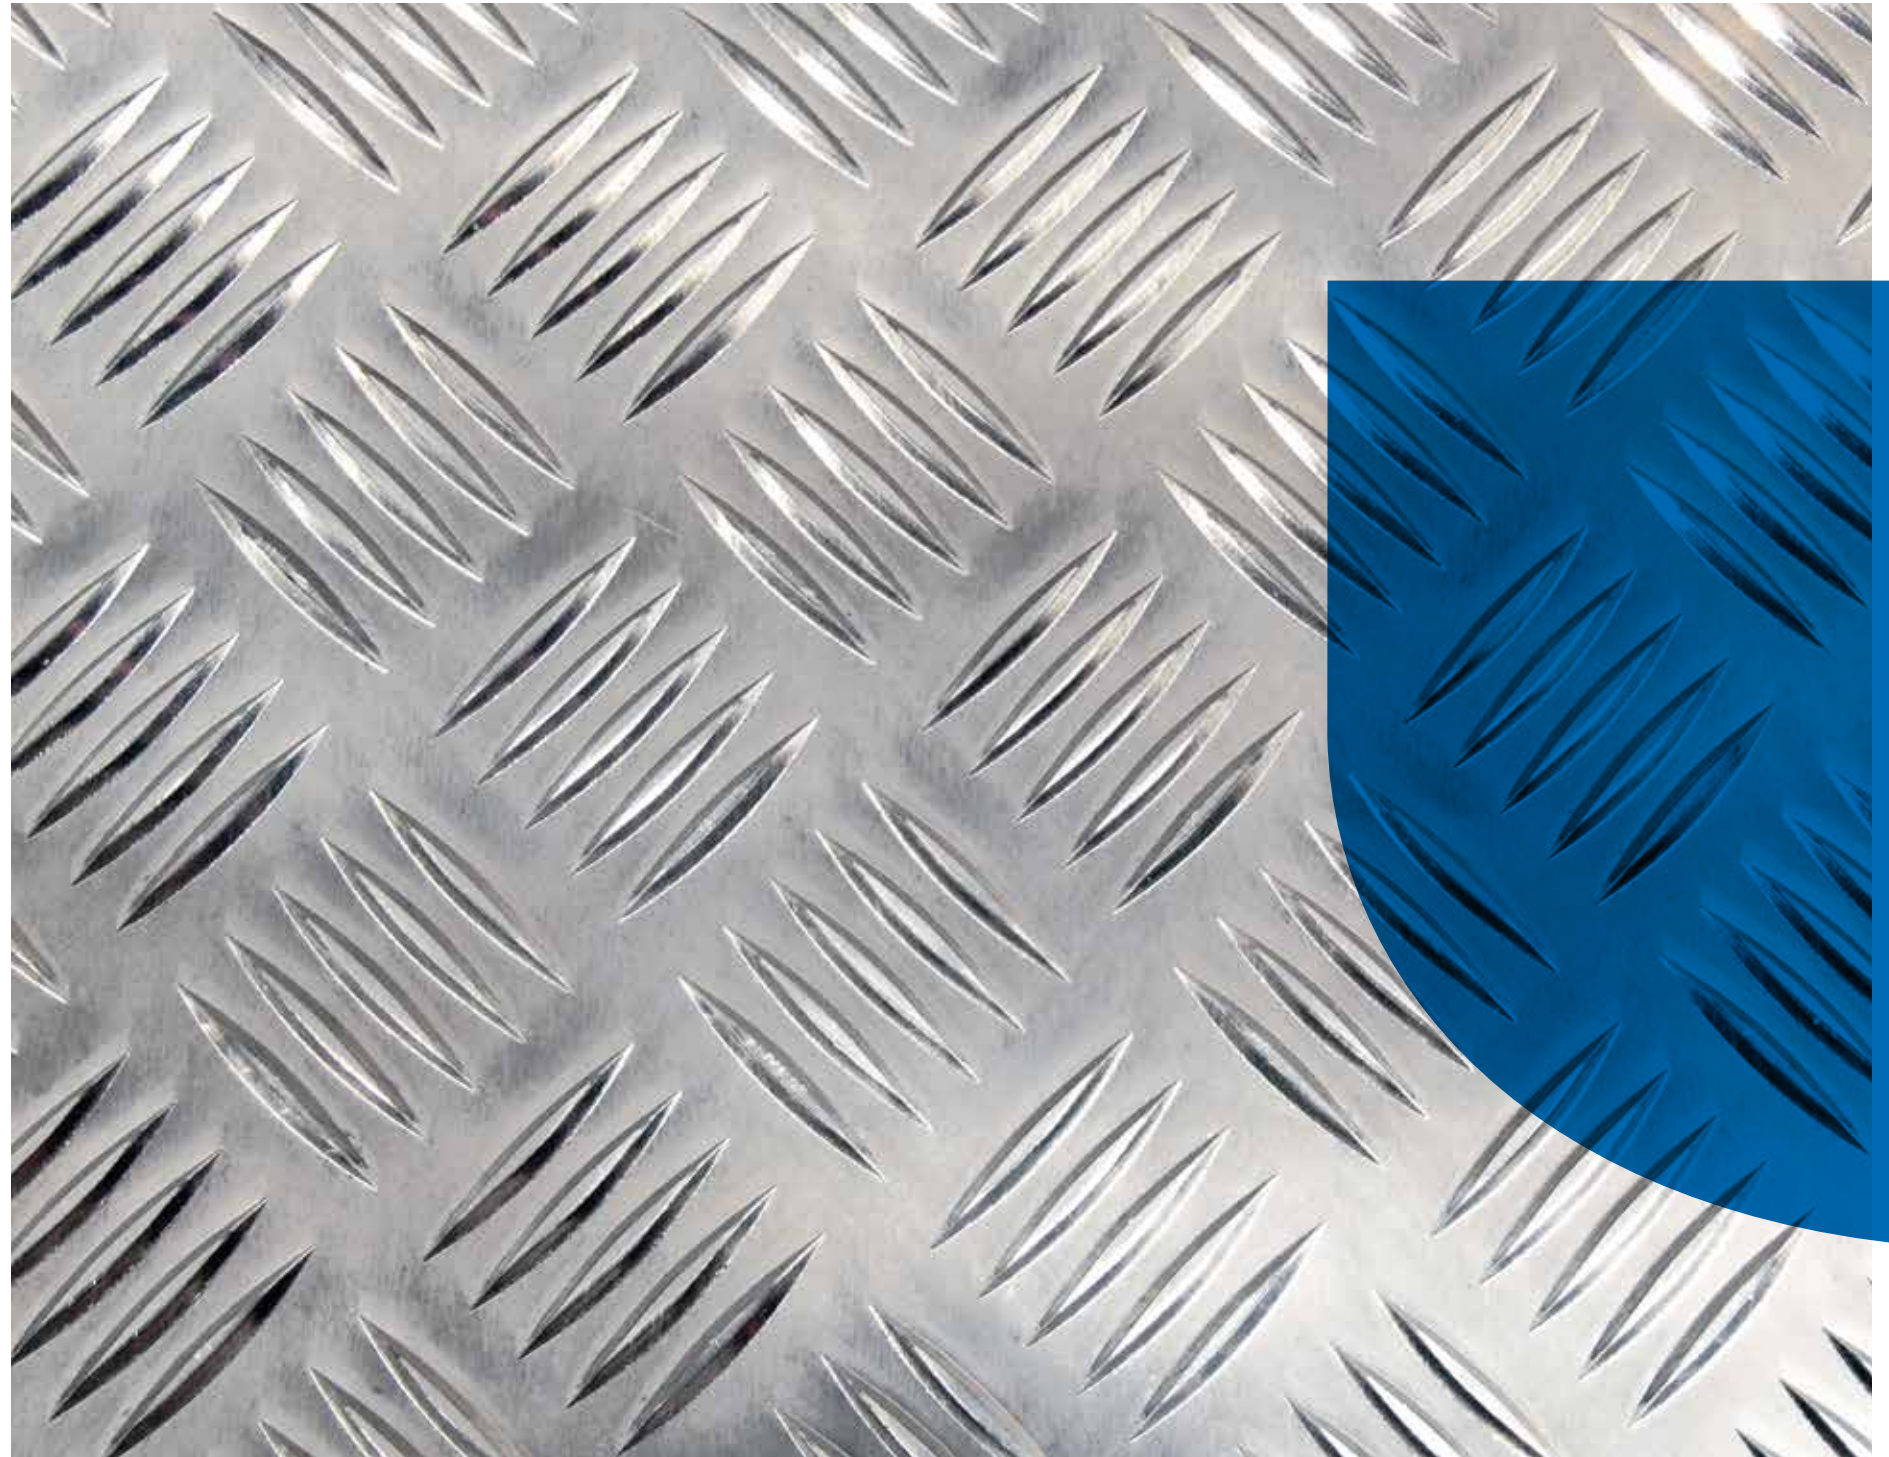

Aluminum and steel are common materials for construction tasks of all kinds. Where typical material properties are no longer sufficient to meet all desired requirements, we offer tailor-made solutions for processing and refining aluminum, steel and stainless steel. From design development, technical construction and production of embossing rollers to the assembly of individual machines or complex systems – we respond to current market developments and provide our customers with innovative solutions.

Flexible packaging

Did you know?

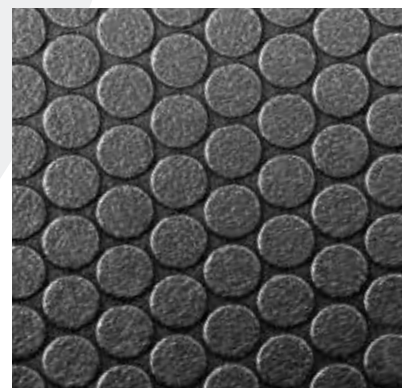

In addition to traditional crafts, we rely on highly developed laser and etching technologies and state-of-the-art direct engraving processes. This enables us to apply even the finest structures to different materials while maintaining consistently high quality.

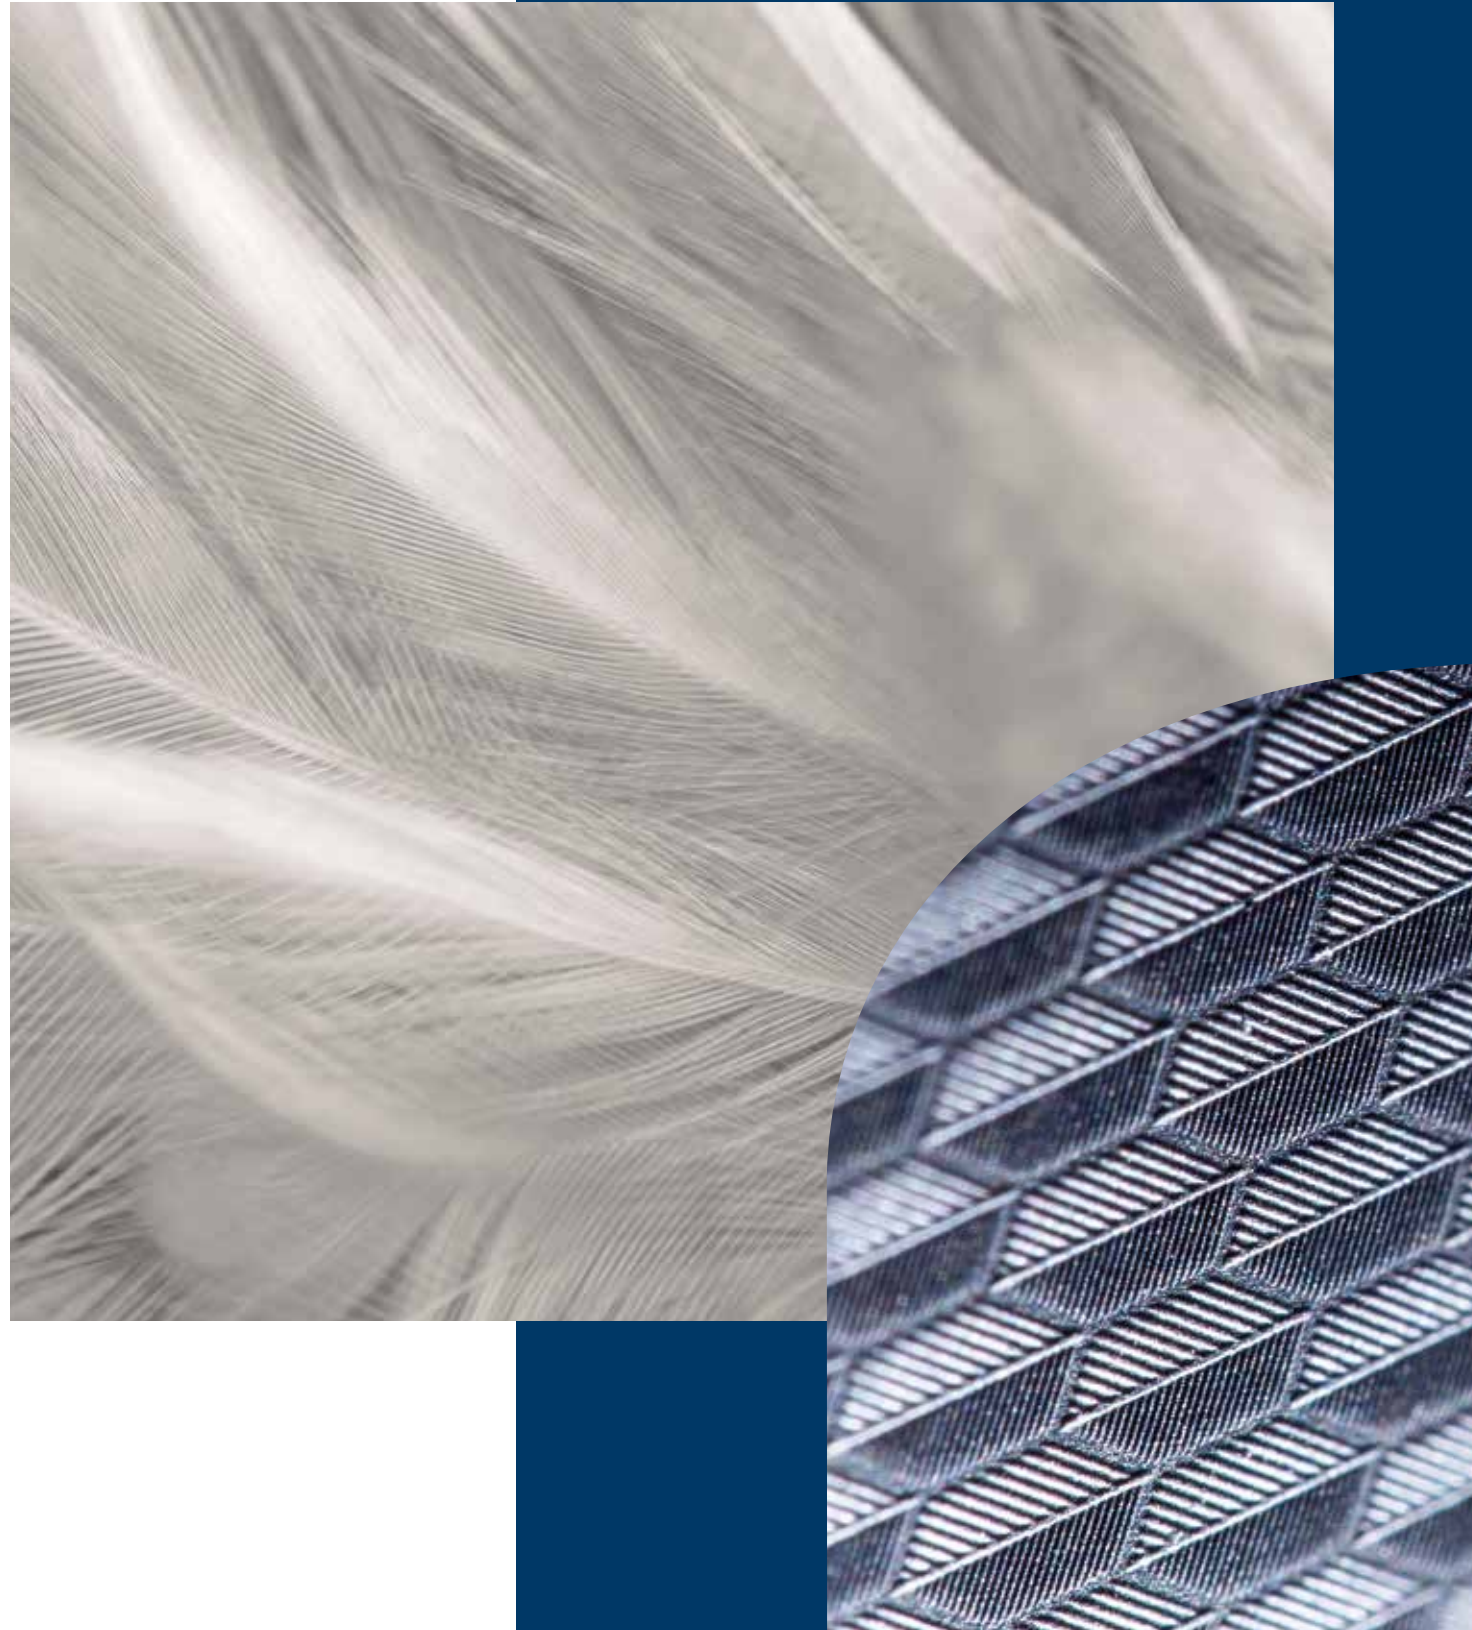

Modern procedures for a perfect result

Producing high-quality embossing rollers, we use all common engraving processes. Thanks to unique combination possibilities, we also realize individual customer requirements and implement even the most complex processes. In addition to applications in architecture and construction, our embossing tools are used for technical and decorative surfaces for interior designs and furniture production. Our designs can also be found in the interiors of well-known automobile manufacturers as well as in the area of flexible packaging.

We are familiar with the complex processes of our demanding customers and support them with professional services and flexibility.

Inspired by **design**. Driven by **technology**.

Design that inspires. We combine creativity with precision. Down to the finest detail.

Consulting

We attach great importance to customer proximity. In personal meetings we advise our customers in all process stages, define relevant target markets and identify solutions for individual requirements.

Development & Design

The creative implementation of your surface design is made by experienced designers and experts in consideration of all relevant technical details.

Layouts

We support our customers through their own decision-making process with digital layouts and 3D prints to achieve the preferred design.

Technology that drives. We focus on technical expertise and high quality. In each of our production steps.

Technical consulting

We provide tailored technical consulting and offer our customers individual solution proposals – goal-oriented and competent.

Embossing rollers & sleeves

We produce tailor-made embossing rollers and sleeves with the latest laser and etching technologies. This enables us to precisely reproduce even the smallest structures.

Production processes

With various manufacturing processes we meet the highest requirements and offer our customers an extraordinary variety of ultra-modern technologies.

Pilot plant

On our in-house pilot plant we test newly developed designs for various technical properties before manufacturing your production roll.

We trust in **international group strength**

As part of Matthews International Corporation, we belong to a strong global network. Therefore we guarantee an excellent development, implementation and coordination of international projects at any time. We are a reliable partner for your business operations across all borders.
